

Interlocking Water Barrier

Product Overview

A heavy-duty, interlocking plastic water barrier designed for clear visual channelization, work zone safety, and crowd control. Featuring a modular design, these units link together to create continuous, highly visible perimeters.

Verified Physical Dimensions

- Overall Maximum Length: 71.3 inches
- Effective Linked Length: 63.9 inches
- Overall Height: 33.9 inches
- Base Width/Depth: 23.4 inches
- Top Pin Hole Diameter: 3.2 inches
- Bottom Pin Hole Diameter: 3.4 inches
- Forklift Slot Height: 7.5 inches

Key Design Features

- **Available Colors:** High-visibility Orange and White.
- **Connection System:** Molded male/female connection points for seamless, continuous linking across multiple units.
- **Mobility:** Two molded-in, pass-through slots at the base allow for easy maneuverability using a forklift or pallet jack when empty.
- **Structural Integrity:** Features a recessed, molded chevron pattern on the primary face to enhance structural rigidity.
- **Drainage:** Includes a designated, molded drain plug location at the bottom right corner for controlled emptying.
